

To encourage good grades, College of DuPage has decided to award each student a bookstore credit that is 10 times the student's grade point average (GPA). In other words, a student with a 3.2 GPA receives \$32 credit. Create a class that prompts a student for a name and GPA, and then passes the values to a method that displays a descriptive message. The message uses the student's name, echoes the GPA, and computes and displays the credit. Save your program as `BookstoreCredit.java`.
